Professional Summary

Backend Software Engineer skilled in Python, API development, database modeling, and backend architecture. Experienced with Flask, FastAPI, SQLAlchemy, and Linux-based deployments. Focused on building clean, scalable systems and contributing to impactful technical projects.

Technical Skills

Languages: Python, C, JavaScript, SQL

Backend: Flask, FastAPI, SQLAlchemy, REST APIs

Tools: Git, Linux, Nginx, Bash, Gunicorn

Concepts: OOP, Web Architecture, Testing (Pytest)

Projects

1. [Event Ticketing Platform \(Ongoing\)\(2025\)](#)

Full-stack ticket booking system for the East African market. Designed backend structure, API endpoints, and database models.

2. [DevSaver \(2025\)](#)

Developer resource center featuring curated learning tools and materials.

3. [Resume Builder – Graduation Project \(2025\)](#)

Collaborated with a peer to build a resume generation tool. Implemented backend logic, template processing, and export features to PDF formats.

4. [Network Security & Log Monitoring Dashboard \(2025\)](#)

Automated installation and configuration of Grafana, Loki, and Promtail using Bash. Contributed to automated security reporting.

Education

[ALX](#) Software Engineering Program (2023–2025)

Training in backend engineering, system programming, databases, and web infrastructure.
